

SDL

API

An application programming interface (API) is a way for two or more computer programs to communicate with each other. It is a type of software interface.

Fork a repo

A fork is a copy of a repository. Forking a repository allows you to freely experiment with changes without affecting the original project.

Repositories

Learn to use and manage the repositories that allow you to store and collaborate on your project's code.

Create a repository

You can store a variety of projects in GitHub repositories, including open-source projects. With open-source projects, you can share code to make better, more reliable software. You can use repositories to collaborate with others and track your work.

Clone

a product that is very similar to another one

UI

User interface (UI) design is the process designers use to build interfaces in software or computerized devices, focusing on looks or style.

latitude and longitude

Latitude and longitude are **a system of lines used to describe the location of any place on Earth**. Lines of latitude run in an east-west direction across Earth. Lines of longitude run in a north-south direction. Although these are only imaginary lines, they appear on maps and globes as if they actually existed.
